

Objets globaux en luatex

January 23, 2026

1 Fonctions globales

2 Modules / tables : liste rapide

3 Modules / tables : contenu des tables

3.1 nodes

dirvalues (table), nuts (table), properties (table), disccodes (table), nodecodes (table), injections (table), simple_font_handler (function), handlers (table), glyphcodes (table), tonut (function), tonode (function),

3.2 utilities

lua (table), json (table), tables (table), zipfiles (table), storage (table), stacker (table), debugger (table), templates (table), files (table), streams (table), parsers (table), strings (table),

3.3 ffi

abi (function), type (function), NULL (cdata), offsetof (function), new (function), arch (string), C (userdata), cast (function), alignof (function), number (function), os (string), fill (function), i64 (function), gc (function), u64 (function), copy (function), cdef (function), string (function), load (function), metatype (function), istype (function), sizeof (function), typeof (function), debug (function), errno (function),

3.4 luatexbase

disable_callback (function), new_bytecode (function), newuserwhatsit (function), base_provides_module (function), in_callback (function), catcodetables (table), getuserwhatsitid (function), module_error (function), attributes (table), new_whatsit (function), base_add_to_callback (function), newuserwhatsitid (function), call_callback (function), create_callback

(function), `uninstall` (function), `get_user_whatsit_id` (function), `errwarinf` (function), `dumpregisteredwhatsits` (function), `getuserwhatsitname` (function), `new_chunkname` (function), `new_luafunction` (function), `dump_registered_whatsits` (function), `get_user_whatsit_name` (function), `registernumber` (function), `reset_callback` (function), `remove_from_callback` (function), `provides_module` (function), `declare_callback_rule` (function), `new_user_whatsit_id` (function), `new_user_whatsit` (function), `module_warning` (function), `add_to_callback` (function), `is_active_callback` (function), `priority_in_callback` (function), `callbacktypes` (table), `callback_descriptions` (function), `module_info` (function), `new_attribute` (function),

3.5 oberdiek

`pdftexcmds` (table),

3.6 lualibs

`extended_loaded` (boolean), `basic_loaded` (boolean), `warn` (function), `prefer_merged` (boolean), `load_extended` (boolean), `loadmodule` (function), `module_info` (table), `info` (function),

3.7 config

`actions` (table), `luaotfload` (table), `lualibs` (table),

3.8 pdfscanner

`scan` (function),

3.9 math

`tan` (function), `ceil` (function), `atan` (function), `type` (function), `acos` (function), `mod` (function), `sinh` (function), `div` (function), `asin` (function), `cos` (function), `randomseed` (function), `frexp` (function), `tanh` (function), `ult` (function), `rad` (function), `exp` (function), `log` (function), `random` (function), `cosh` (function), `tointeger` (function), `pow` (function), `sqrt` (function), `ceiling` (function), `initialseed` (number), `even` (function), `odd` (function), `tand` (function), `max` (function), `min` (function), `maxinteger` (number), `round` (function), `mininteger` (number), `atan2` (function), `floor` (function), `huge` (number), `deg` (function), `sind` (function), `sin` (function), `modf` (function), `ldexp` (function), `abs` (function), `pi` (number), `log10` (function), `cosd` (function), `fmod` (function),

3.10 kpse

`in_name_ok_silent_extended` (function), `var_value` (function), `default_texmfcnf` (function), `check_permission` (function), `record_output_file` (function), `new` (function), `read-`

able_file (function), lookup (function), expand_path (function), out_name_ok_silent_extended (function), version (function), find_file (function), record_input_file (function), show_path (function), out_name_ok (function), init_prog (function), in_name_ok (function), expand_var (function), expand_braces (function), set_program_name (function),

3.11 table

derive (function), fastserialize (function), collapsedhash (function), sortedhashonly (function), mirrored (function), getn (function), sortedhash (function), serialize (function), orderedhash (function), sparse (function), are_equal (function), insert (function), sequenced (function), reverse (function), allkeys (function), unnest (function), strip (function), sort (function), sortedhashkeys (function), setmetatablecall (function), makeweak (function), unpack (function), save (function), tohandle (function), has_one_entry (function), values (function), prepend (function), loweredkeys (function), pack (function), flattened (function), toxml (function), fastcopy (function), identical (function), sub (function), getmetatablekey (function), imerge (function), setmetatablekey (function), print (function), merge (function), tocsv (function), setmetatableindices (function), setmetatablenewindex (function), sorted (function), swapped (function), sortedkeys (function), collapsed (function), combine (function), ordered (function), hashed (function), deserialize (function), twowaymapper (function), append (function), drop (function), move (function), tofile (function), imerged (function), is_empty (function), load (function), copy (function), reversed (function), fromhash (function), contains (function), filtered (function), reverse_hash (function), unique (function), sortedindexonly (function), concat (function), is_simple_table (function), merged (function), setmetatableindex (function), tohash (function), remove (function), count (function), sortedpairs (function), compact (function), keys (function),

3.12 mplib

char_height (function), version (function), get_number (function), char_depth (function), char_width (function), get_boolean (function), finish (function), get_string (function), get_numeric (function), new (function), pen_info (function), solve_path (function), fields (function), statistics (function), get_path (function), execute (function),

3.13 socket

source (function), bind (function), __unload (function), gettime (function), __SETSIZE (number), tcp (function), __SOCKETINVALID (number), sourcet (table), tcp4 (function), protect (function), tcp6 (function), headers (table), url (table), __DATAGRAMSIZE (number), newtry (function), connect6 (function), ftp (table), http (table), smtp (table), tp (table), udp6 (function), udp (function), sinkt (table), __DEBUG (boolean), __VERSION (string), udp4 (function), connect (function), dns (table), sink (function), choose (func-

tion), BLOCKSIZE (number), try (function), skip (function), sleep (function), connect4 (function), select (function),

3.14 arg

1 (string), 2 (string), 3 (string), 0 (string),

3.15 pgf

pgfversion (string),

3.16 ltx

utils (table),

3.17 bit32

lrotate (function), rshift (function), bor (function), bxor (function), replace (function), arshift (function), rrotate (function), extract (function), band (function), bnot (function), btest (function), lshift (function),

3.18 zlib

version (function), crc32 (function), compressobj (function), decompressobj (function), Adler32 (function), decompress (function), compress (function),

3.19 luaHarfbuzz

Feature (table), unicode (table), Tag (table), shapers (function), version (function), Script (table), Face (table), ot (table), Variation (table), shape_full (function), Font (table), Language (table), Blob (table), Direction (table), Buffer (table),

3.20 xzip

version (function), crc32 (function), compressobj (function), decompressobj (function), Adler32 (function), decompress (function), compress (function),

3.21 logs

disable (function), newline (function), enable (function), reporter (function), name (string),

3.22 pdf

gettrailerid (function), getmaxobjnum (function), getpkresolution (function), hasmatrix (function), mapfile (function), maxobjnum (function), reserveobj (function), setpkresolution (function), objtype (function), setfontattributes (function), getlastobj (function), getorigin (function), getmatrix (function), getmajorversion (function), getxformresources (function), getcreationdate (function), newcolorstack (function), setinfo (function), gettrecompress (function), getomitmediabox (function), setxformattributes (function), getinfo (function), setdestmargin (function), setminorversion (function), getignoreunknownimages (function), immediateobj (function), getxformname (function), settrailerid (function), getlinkmargin (function), gethpos (function), getpageref (function), setforcefile (function), obj (function), settypeonewidemode (function), fontobjnum (function), getpos (function), setomitcidset (function), getlastannot (function), fontsize (function), includechar (function), xformname (function), fontname (function), setcompresslevel (function), getsuppressoptionalinfo (function), includefont (function), includeimage (function), getcompresslevel (function), setsuppressoptionalinfo (function), getomitcidset (function), getthreadmargin (function), getnofobjects (function), pageref (function), getlastlink (function), mapline (function), getcatalog (function), setomitmediabox (function), getpageattributes (function), settrecompress (function), getobjtype (function), setmajorversion (function), setxformresources (function), getpageresources (function), registerannot (function), print (function), setomitcharset (function), setgentounicode (function), refobj (function), setignoreunknownimages (function), setpageattributes (function), getdestmargin (function), setdecimaldigits (function), getminorversion (function), setthreadmargin (function), setpageresources (function), getgentounicode (function), setpagesattributes (function), getxformattributes (function), settrailer (function), getxformmargin (function), getdecimaldigits (function), setlinkmargin (function), getomitcharset (function), setcatalog (function), getimageresolution (function), setimageresolution (function), setorigin (function), setnames (function), getpagesattributes (function), getomitinfo (function), gettrailer (function), getfontsize (function), getfontobjnum (function), getfontname (function), setinclusionerrorlevel (function), setxformmargin (function), setobjcompresslevel (function), getobjcompresslevel (function), getinclusionerrorlevel (function), getvpos (function), getretval (function), setomitinfo (function), getnames (function),

3.23 io

stdin (userdata), stdout (userdata), pathseparator (string), type (function), readstring (function), tmpfile (function), stderr (userdata), readnumber (function), close (function), ask (function), loadlines (function), bytes (function), loaddata (function), read (function), write (function), fileseparator (string), flush (function), characters (function), noflines (function), size (function), lines (function), exists (function), loadchunk (function), readall (function), savedata (function), popen (function), copydata (function), open (function),

input (function), output (function),

3.24 token

biggest_char (function), type (function), scan_word (function), scan_cname (function), scan_real (function), scan_token (function), scan_dimen (function), get_macro (function), get_command (function), scan_glue (function), get_protected (function), set_macro (function), set_lua (function), expand (function), scan_argument (function), create (function), scan_string (function), scan_float (function), new (function), set_char (function), scan_code (function), is_defined (function), get_meaning (function), get_tok (function), commands (function), scan_int (function), get_expandable (function), is_token (function), get_id (function), get_cname (function), put_next (function), get_cmdname (function), get_mode (function), get_index (function), scan_list (function), command_id (function), scan_keyword_cs (function), scan_toks (function), get_active (function), scan_keyword (function), get_next (function),

3.25 tex

set_synctex_mode (function), set_synctex_tag (function), settoks (function), muglue (table), getmodevalues (function), getbox (function), set_synctex_no_files (function), setbox (function), getboxresourcebox (function), force_synctex_line (function), getmath (function), isskip (function), getfontoffamily (function), romannumeral (function), getnest (function), nest (table), run (function), lists (table), splitbox (function), gettoks (function), mathcode (table), catcode (table), uccode (table), getdimen (function), resetparagraph (function), scantoks (function), setnest (function), sfcode (table), getskip (function), getsfcode (function), getmuglue (function), setmathcode (function), toks (table), setmuskip (function), triggerbuildpage (function), iscount (function), set_synctex_line (function), setmath (function), getboxresourcedimensions (function), glue (table), setlist (function), extraprimitives (function), skip (table), ismuskip (function), setuccode (function), isdimen (function), runtoks (function), finish (function), istoks (function), getlccode (function), quittoks (function), get (function), isattribute (function), attribute (table), get_synctex_line (function), fontidentifier (function), force_synctex_tag (function), tprint (function), get_synctex_tag (function), isglue (function), sprint (function), getmathcodes (function), setcatcode (function), lccode (table), getlocallevel (function), getattribute (function), getcatcode (function), setdelcode (function), init_rand (function), number (function), ismuglue (function), uniformdeviate (function), lua_math_random (function), dimen (table), setmuglue (function), definefont (function), cprint (function), muskip (table), useboxresource (function), scale (function), getcount (function), primitives (function), print (function), getmathcode (function), show_context (function), lua_math_randomseed (function), round (function), normal_rand (function), isbox (function), hashtokens (function), error (function), getpagestate (function), delcode (table), badness (function),

shipout (function), getmuskip (function), setlccode (function), uniform_rand (function), fontname (function), sp (function), setcount (function), getuccode (function), box (table), setsfcode (function), saveboxresource (function), write (function), enableprimitives (function), getglue (function), getdelcodes (function), setattribute (function), getdelcode (function), getlist (function), setdimen (function), setskip (function), linebreak (function), forcehmode (function), count (table), get_synctex_mode (function), getmark (function), setglue (function), set (function),

3.26 utf

utf16_to_utf8_be (function), utf16_to_utf8_le_t (function), totable (function), toentities (function), replacer (function), sub (function), is_valid (function), length (function), utf8_to_utf16_be (function), split (function), utf32_to_utf8_be (function), chrln (function), filetype (function), len (function), utf8_to_utf16 (function), magic (function), toutf32string (function), utf16_to_utf8_t (function), utf8_to_utf16_le (function), xstring (function), splitlines (function), count (function), lower (function), values (function), utf16_to_utf8_le (function), byte (function), upper (function), toeight (function), ustring (function), characters (function), utf32_to_utf8_le (function), tocodes (function), remapper (function), utf32_to_utf8_be_t (function), utf32_to_utf8_t (function), utf32_to_utf8_le_t (function), utf8_to_utf8_t (function), char (function), utf16_to_utf8_be_t (function), substituter (function),

3.27 statistics

stoptiming (function), tracefunction (function), elapsed (function), benchmarktimer (function), currenttime (function), enable (boolean), memused (function), resettiming (function), starttiming (function), timed (function), elapsedindeed (function), formatruntime (function), show (function), register (function), elapsedtime (function), runtime (function), hastiming (function), threshold (number), elapsedseconds (function),

3.28 _G

nodes (table), type (function), utilities (table), xpcall (function), ffi (table), luatexbase (table), oberdiek (table), lualibs (table), config (table), pdfscanner (table), build_root_dir (function), math (table), module (function), kpse (table), rawequal (function), tonumber (function), loadfile (function), table (table), mplib (table), socket (table), tostring (function), arg (table), pgf (table), ipairs (function), ltx (table), bit32 (table), to_nfd_table (function), toboolean (function), CONTEXTLMTXMODE (number), zlib (table), luaharfbuzz (table), xzip (table), logs (table), LUAMAJORVERSION (number), pdf (table), io (table), token (table), LUALATEXENGINE (string), pairs (function), tex (table), utf (table), unpack (function), statistics (table), _G (table), texconfig (table), dimen (function), luaotfload (table), trackers (table), fonts (table), ltn12 (table), utf8 (table), mbox (table),

set (table), url (table), callback (table), texio (table), dir (table), lang (table), file (table), L^AT_EXCOREVERSION (number), rawget (function), number (table), registered (function), combine (function), sio (table), _VERSION (string), FFISUPPORTED (function), zip (table), optionalrequire (function), unicode (table), setinspector (function), pcall (function), LUAVERSION (number), status (table), print (function), LUAMINORVERSION (number), string (table), package (table), modules (table), boolean (table), require (function), next (function), error (function), sha2 (table), loadstring (function), lpeg (table), pdfc (table), node (table), gzip (table), vf (table), os (table), lua (table), font (table), assert (function), inspect (function), fontloader (table), rawlen (function), functions (table), coroutine (table), load (function), select (function), mime (table), dofile (function), getmetatable (function), fio (table), lfs (table), md5 (table), setmetatable (function), img (table), debug (table), rawset (function), collectgarbage (function),

3.29 texconfig

kpse_init (boolean),

3.30 luaotfload

fontloader (table), add_multiscript (function), harfbuzz (table), get_script_mark (function), features (table), main (function), harf (table), add_colorscheme (function), define_font (function), apply_default_features (function), version (string), default_config (table), add_fallback (function), fontloader_package (string), letterspace (table), set_transparent_colorstack (function), resolvers (table), set_transparenthandler (function), parsers (table), set_colorhandler (function), log (table), loaders (table), aux (table),

3.31 trackers

disable (function), register (function), enable (function), newline (function), name (string),

3.32 fonts

mappings (table), readers (table), analyzers (table), formats (table), specifiers (table), loggers (table), helpers (table), constructors (table), hashes (table), tables (table), tracers (table), encodings (table), expansions (table), protrusions (table), names (table), cid (table), privateoffsets (table), handlers (table), definers (table),

3.33 ltn12

source (table), pump (table), filter (table), _NAME (string), sink (table), BLOCKSIZE (number), _VERSION (string), _M (table), _PACKAGE (string),

3.34 utf8

offset (function), codes (function), len (function), codepoint (function), charpattern (string), char (function),

3.35 mbox

split_headers (function), parse_header (function), parse_message (function), parse (function), split_message (function), split_mbox (function), parse_from (function), parse_headers (function),

3.36 set

tolist (function), tonumber (function), contains (function), totable (function), create (function),

3.37 url

escape (function), addscheme (function), unescapeget (function), hashed (function), hasscheme (function), split (function), barepath (function), query (function), unescape (function), toquery (function), decode (function), filename (function), construct (function), encode (function),

3.38 callback

register (function), find (function), list (function),

3.39 texio

write (function), write_nl (function), closeinput (function), reporter (function), setescape (function),

3.40 dir

globpattern (function), expandlink (function), makedirs (function), pop (function), glob (function), found (function), globfiles (function), mkdirs (function), push (function), globdirs (function), ls (function), expandname (function), collectpattern (function), current (function),

3.41 lang

hyphenationmin (function), hyphenate (function), clean (function), id (function), gethjcode (function), postexhyphenchar (function), clear_patterns (function), sethjcode (function),

new (function), hyphenation (function), prehyphenchar (function), patterns (function), posthyphenchar (function), clear_hyphenation (function), preexhyphenchar (function),

3.42 file

splitpath (function), collapse_path (function), extname (function), addsuffix (function), suffix (function), suffixesonly (function), basename (function), is_readable (function), replacesuffix (function), nametotable (function), split_path (function), removesuffix (function), readdata (function), splitname (function), reslash (function), pathpart (function), suffixes (function), dirname (function), is_writable (function), join (function), joinpath (function), splitbase (function), iswritable (function), collapsepath (function), copy (function), expandname (function), robustname (function), withinbase (function), needsupdating (function), savechecksum (function), checksum (function), isreadable (function), loadchecksum (function), syncmtimes (function), is_rootbased_path (function), strip (function), needs_updating (function), is_qualified_path (function), suffixonly (function), save-data (function), size (function), nameonly (function),

3.43 number

tobasepoints (function), splitdimen (function), tocentimeters (function), tociceros (function), % (function), tonumberf (function), tonumberg (function), tobitstring (function), toevenhex (function), topicsas (function), compactfloat (function), toscaledpoints (function), toscaled (function), tomillimeters (function), valid (function), formattedfloat (function), formatted (function), nubasepoints (function), totoves (function), percent (function), decimaltobyte (function), nupoints (function), bytetodecimal (function), toediths (function), signed (function), dimenfactors (table), todimen (function), to16dot16 (function), maxdimen (number), sparseexponent (function), basepoints (function), toinches (function), idiv (function), todidots (function), points (function), topoints (function),

3.44 sio

readinteger4 (function), readinteger4le (function), readcardinal2le (function), readinteger1 (function), readintegertable (function), readfixed4 (function), readcardinal3le (function), readcardinal2 (function), readcardinaltable (function), read2dot14 (function), readinteger3le (function), readcardinal4 (function), readbytetable (function), readbytes (function), readcardinal1le (function), readfixed2 (function), readinteger2le (function), readcardinal3 (function), readcardinal1 (function), readinteger1le (function), readinteger3 (function), readcardinal4le (function), readinteger2 (function),

3.45 zip

`__DESCRIPTION` (string), `__COPYRIGHT` (string), `close` (function), `__VERSION` (string), `type` (function), `openfile` (function), `open` (function),

3.46 unicode

`utf8` (table), `ascii` (table), `grapheme` (table), `latin1` (table),

3.47 status

`setexitcode` (function), `resetmessages` (function), `list` (function),

3.48 string

`tobytes` (function), `unquoted` (function), `toHEX` (function), `tformat` (function), `split` (function), `utfcharacters` (function), `checkedsplit` (function), `utfpadding` (function), `escapedquotes` (function), `todimen` (function), `replacenewlines` (function), `reverse` (function), `utflength` (function), `itself` (function), `strip` (function), `quoted` (function), `lower` (function), `splitlines` (function), `characterpairs` (function), `match` (function), `byte` (function), `bytepairs` (function), `utfcharacter` (function), `unpack` (function), `gsub` (function), `escapedpattern` (function), `utfpadd` (function), `pack` (function), `packsize` (function), `limit` (function), `toboollean` (function), `find` (function), `totable` (function), `sub` (function), `utfvalues` (function), `format` (function), `characters` (function), `autodouble` (function), `gmatch` (function), `bytetable` (function), `bytes` (function), `wordsplitter` (function), `toutf` (function), `optionalquoted` (function), `explode` (function), `formatter` (function), `containsws` (function), `formatters` (table), `texnewlines` (function), `unescapedquotes` (function), `longtostring` (function), `unquote` (function), `nospaces` (function), `tracedchar` (function), `tracedchars` (table), `is_empty` (function), `nspaces` (table), `todec` (function), `utfvalue` (function), `autosingle` (function), `valid` (function), `upper` (function), `is_boolean` (function), `booleanstring` (function), `tohex` (function), `len` (function), `topattern` (function), `char` (function), `splitup` (function), `quote` (function), `count` (function), `rep` (function), `dump` (function), `collapsespaces` (function), `fullstrip` (function),

3.49 package

`poplibpath` (function), `loadlib` (function), `path` (string), `searchers` (table), `pushlibpath` (function), `cpath` (string), `extralupath` (function), `libpaths` (function), `luapaths` (function), `loaded` (table), `extralibpath` (function), `extralupaths` (function), `helpers` (table), `extralibpaths` (function), `pushluupath` (function), `seeall` (function), `preload` (table), `config` (string), `searchpath` (function), `loaders` (table), `popluupath` (function),

3.50 modules

l-table (table), font-con (table), l-md5 (table), font-lua (table), util-deb (table), font-dsp (table), luatex-font-mis (table), font-ota (table), luatex-fonts-def (table), data-con (table), luat-basics-gen (table), font-cid (table), font-otj (table), font-ttf (table), util-fil (table), font-afk (table), util-dim (table), font-ocl (table), util-lua (table), font-cff (table), luatex-fonts-nod (table), font-imp-effects (table), luatex-font-enc (table), util-str (table), font-onr (table), util-sac (table), util-tpl (table), l-unicode (table), l-os (table), util-zip (table), font-ott (table), font-ini (table), l-number (table), util-sto (table), util-tab (table), util-jsn (table), font-osd (table), font-otr (table), font-oto (table), luatex-fonts-ext (table), l-lua (table), l-io (table), l-url (table), luatex-fonts-tfm (table), font-one (table), util-sta (table), luatex-fonts-gbn (table), font-imp-italics (table), font-ots (table), font-imp-ligatures (table), font-otc (table), l-math (table), l-lpeg (table), l-dir (table), font-oup (table), font-imp-tex (table), font-shp (table), font-def (table), l-file (table), l-string (table), util-prs (table), font-vfc (table), trac-inf (table), l-package (table), l-functions (table), font-otl (table), l-boolean (table), l-set (table), font-map (table), font-oti (table),

3.51 boolean

tonumber (function),

3.52 sha2

digest384 (function), digest256 (function), digest512 (function),

3.53 lpeg

secondofsplit (function), Cc (function), setutfcasers (function), times (function), splitat (function), type (function), Cg (function), UP (function), Cmt (function), instrchecker (function), replacer (function), version (function), pcode (function), Ct (function), stripper (function), split (function), UR (function), print (function), splitters (table), V (function), S (function), Cp (function), utfchartabletopattern (function), ptree (function), utfreplacer (function), Carg (function), tsplitter (function), containsws (function), append (function), Cf (function), oneof (function), keeper (function), is_lpeg (function), splitter (function), match (function), frontstripper (function), C (function), balancer (function), afterprefix (function), B (function), setmaxstack (function), beforesuffix (function), Cb (function), finder (function), tsplitat (function), Cs (function), endstripper (function), checkedsplit (function), firstofsplit (function), anywhere (function), counter (function), US (function), locale (function), patterns (table), R (function), P (function),

3.54 pdfc
